Features

- Pilot operated valves with position feedback and on-board electronics for reducing system pressure in the consumer (pilot oil internal only)
- 3-way version (P-A/A-T), $p_{\min} = p_T$
- Adjustable through the position of the armature against the compression spring
- Position-controlled, minimal hysteresis < 1 %, rapid response times, see Technical data
- Pressure limitation to a safe level even with faulty electronics (solenoid current $I > I_{\max}$)
- For subplate attachment, mounting hole configuration to ISO 4401-03-02-0-05. Subplates as per catalog sheet RE 45053 (order separately)
- Plug-in connector to DIN 43563-AM6, see catalog sheet RE 08008 (order separately)
- Data for the on-board trigger electronics
 - Complies with CE, EMC directives EN 61000-6-2: 2002-08 and EN 61000-6-3: 2002-08
 - $U_B = 24 V_{\text{nom}}$ DC
 - Electrical connection 6P+PE
 - Signal actuation
 - Standard 0...+ 10 V (A1)
 - Version 4...20 mA (F1)
 - Valve curve calibrated at the factory

Function, sectional diagram

General

Type DREBE6X proportional pressure reducing valves are pilot operated with a 3-way main stage.

The pilot valve (pressure relief valve pilot stage) is supplied internally with a controlled flow of pilot oil via P.

The valves are actuated by means of a position-controlled proportional solenoid with on-board electronics.

With these valves, the pressure in A (consumer) can be infinitely adjusted and reduced in relation to the setpoint.

 EN 61000-6-2: 2002-08
EN 61000-6-3: 2002-08

Basic principle

To adjust the system pressure in A, a setpoint is set in the trigger electronics. Based on this setpoint, the electronics control the position of the solenoid against the spring force. The proportional solenoid is positioned precisely on the spring characteristic curve. The pilot stage is supplied with oil from P at a flow rate of $< 0.6 \text{ l/min}$ via a flow control valve. The pilot pressure is compared with the consumer pressure (plus spring) in A and regulated.

The spring results in $p_{Amin} = p$ in T.

Pressure limitation for maximum safety

If a fault occurs in the electronics, so that the solenoid current (I_{max}) would exceed its specified level in an uncontrolled manner, the pressure cannot rise above the level determined by the maximum spring force.

Technical notes for the cable

- Version:**
- Multi-wire cable
 - Extra-finely stranded wire to VDE 0295, Class 6
 - Safety earth conductor, green/yellow
 - Cu braided shield
- Type:**
- e.g. Ölflex-FD 855 CP (from Lappkabel company)
- No. of wires:**
- Determined by type of valve, plug type and signal assignment
- Cable Ø:**
- 0.75 mm² up to 20 m long
 - 1.0 mm² up to 40 m long
- Outside Ø:**
- 9.4...11.8 mm – Pg 11
 - 12.7...13.5 mm – Pg 16

Important

Voltage supply 24 V DC nom.,
if voltage drops below 18 V DC, rapid shutdown resembling
“Enable OFF” takes place internally.

In addition, with the “mA signal” version:

$I_{D-E} \geq 3 \text{ mA}$ – valve is active

$I_{D-E} \leq 2 \text{ mA}$ – valve is deactivated.

Electrical signals emitted via the trigger electronics (e.g. actual values) must not be used to shut down safety-relevant machine functions!

(See also European Standard, “Technical Safety Requirements for Fluid-Powered Systems and Components – Hydraulics”, EN 982.)
